ARMONK, N. Y.

You, as a flower hobbyist or retail grower, may well have difficulty in buying desired varieties at retail, or must buy too many of one kind at wholesale, or are unable to find some kinds at any price.

Meanwhile, specialists are developing and improving the plant of their choice. In contrast to purely commercial growers, they have variety rather than volume. This, without commercial overhead cost, makes possible our unique feature of "one or more of each variety," at fair prices.

This service provides an outlet for specialist growers and a convenient, economical source of supply for you.

"Grow Extra Dollars—At Home"

The author, Ray Reynolds, has built a profitable sideline business growing plants at home for wholesale to local retail outlets, while commuting to his regular city job.

From practical and successful experience he tells home gardeners how to procure or make the equipment needed, what to grow, how to plan production, how to price, where and how to sell... in short, exactly how to have a profitable hobby and your own business.

"Serves as an invaluable guide as it deals with information not found in the typical garden books."—Chicago Tribune

"Covers both the business principles involved and the many operating details."—Flower Grower Magazine

"There is much in this small volume to make it valuable to anyone."—Organic Gardening Magazine

PEONY ROOTS

(STANDARD 3 TO 5 EYE DIVISIONS)

Peonies are completely hardy, and not fussy. Plant them in the fall, feed them and leave them alone. They live for years and become a lifetime investment. The foliage is attractive all summer and the blooms, of course are gorgeous. Good cut flower varieties are marked below with an asterisk. Singles and Japanese varieties are especially good for arrangements.

CYCLAMEN

(PLANTS FROM 4" POTS)

A luxury item originating in ancient Persia, and one of the showiest of flowering pot plants for the Holidays, cyclamen are something of a challenge. Like gloxinias, however, they richly reward careful culture.

These plants have been growing under glass for a year and are timed to bloom for Christmas. The numerous long-lasting flowers, with petals thrown back like the wings on a diving hawk, nod brilliantly over dark ruddy-green foliage. The varieties are named although peculiarly some names are simply that of color.

CACTUS

(rooted 2" to 3" plants)

Novelty cacti produce strangely beautiful flowers. They require little attention, thrive in artificially heated homes, and go well with modern decor and ranch type houses. Also useful as give-aways to greenhouse visitors.

Our Texas growers wrote us "These are blooming size plants, shipped bare root. You will have some complaints as most people are not familiar with them and think the dry looking plant is dead when really it is in normal condition. We will make good any complaints."

NIGHT BLOOMING CEREUS (Cereus Pentagonus)—fast growing. Makes large plant. Produces breathtakingly beautiful bowl sized flowers at night.
DOPE CACTUS (Lophophora Williamsii)—pale pink flower. Two or three plants cause southwestern Indians to "See beyond the pearly gates."
EASTER LILY CACTUS (Echinopsis hybrid)—large lily like flowers in Easter season. One plant has as many as fifteen flowers.
CENTURY PLANT (Agave Americana)—Mexicans use this for making cloth, rope, and tequilla.
BOXING GLOVE CACTUS (Opuntia Mammillaria Cristata)—a freak of nature this plant has many limbs shaped in the form of a boxing glove.
TWISTED RIB (Hamatocactus Setispinus)—yellow flowers all summer.
PIN CUSHION (Mammillaria Hemisphaerica)—white flowers and beautiful red edible fruit. A most attractive plant.
DUMPLING CACTUS (Coryphantha Runyonii)—lavender flowers. The name comes from large tubercles all over the plant.
GLORY OF TEXAS (Thelocactus Bicolor)—beautiful plant with red and white spines, pink flowers.
ORANGE TUNA (Opuntia Elata)—large orange flowers and fruit.
MARTINS HARISIA (Harrisia Martinii)—cylindrical plant with extra large flowers all summer.
TREE CACTUS (Opuntia Imbrigata)—ropelike joints. Many purple flowers.
QUEEN OF THE NIGHT (Hylocereus Undatus)—largest of all night bloomers.
BURBANK SPINELESS (Opuntia Ficus Indica)—spineless cactus used in Mexican border areas as a fresh vegetable. Excellent with eggs.
DEER TONGUE (Nopalea Auberi)—long narrow leaves. Beautiful red buds all year. The buds never open into flowers.
LADY FINGER (Echinocereus Pentalopus)—grows in clusters and produces many showy purple flowers.
LACE CACTUS (Echinocereus Reichenbachii)—lace like plant, large orchid bloom.
FISH HOOK (Ancistrocactus Scheeri)—hooked spines and unusual green flowers.
JUNIOR TOM THUMB (Escobaria Runyonii)—one of the smallest of all cacti.
NIPPLE CACTUS (Dolichothele Spaerica)—grows in clusters and produces many silky, yellow flowers.
PINE TREE (Opuntia Leptocaulis)—white flower. Also called Turkey Pear as wild turkeys live on the fruit.
RABBIT EAR (Opuntia Microdasy)—a beautiful plant covered with tufts, called glochids, of velvety yellow spines.
HONEY MIKE (Opuntia Microdasy Alba)—like above but with white glochids.
BLIND PEAR (Opuntia Rufida)—like above but red glochids, yellow flowers.
COB CACTUS (Echinocereus Enneacanthus)—grows in clusters. Delicious edible fruit. Large purple flowers all summer.

Why guess at soil mixtures?

When the book tells you what soil best suits the plant, that is precisely the mixture you can give it. Or you can get away from the book and experiment with your own planned mixtures. Either way the results are gratifying, and interesting.

You add to the game by analyzing your soil and correcting deficiencies in nitrogen, phosphate, potash, and acidity. You need no knowledge of chemistry to do this with a SUDBURY SOIL TEST KIT:

... DELUXE (Model A).....29.95 \$
